New Gas Powered Driver from Rhino Tool Company

KEWANEE, IL (Sept. 18, 2012) Rhino Tool Company is introducing the latest innovation to their line of post drivers. The Rhino® GPD-30™ Gas Powered Driver is a lightweight, compact driver designed with a 2-inch chuck for the most commonly driven posts.

Powered by a Honda 4-cycle engine, the GPD-30™ is powerful and can drive posts in seconds. It is easy to transport and operate. Weighing only 35 pounds when fully fueled, a single person can quickly handle post driving tasks. Unlike traditional post driving tools, the GPD-30™ does not require additional equipment such as, propane, air compressor, or hydraulic power source.

Rhino has ergonomically designed the handles for weight distribution and incorporated internal vibration dampening for the operator's comfort. Though the driver is economically priced, Rhino® GPD-30™ components are engineered to the highest quality and for durability. The driver is manufactured from the very best materials to promote long tool life, including heat-treated alloy steel, "aircraft quality" aluminum, stainless steel fasteners and bearings on all rotating parts.

The GPD-30™ is the perfect tool for post driving tasks across several industries, such as farming, vineyard, sign installation, professional fence contractors, and many more.

Rhino Tool Company, is an approved Original Equipment Manufacturer with American Honda Motor Co., Inc.

Compact, lightweight, and powerful, the new GPD-30™ from Rhino Tool Company makes quick work of driving common posts

POWERED by HONDA™

Rhino Tool Company has been a leading manufacturer of pneumatic post drivers as well as manual and hydraulic post pullers since 1975. Nearly all of the components of Rhino's products are designed, produced and assembled in the United States. Rhino Tool Company currently maintains distribution in 47 countries and works with hundreds of dealer locations throughout the United States and Canada.
